Introduction to Python Programming

Python is a high-level programming language.

It is widely used for web development, automation, data science, and AI.

What is RAG?

RAG stands for Retrieval-Augmented Generation.

It retrieves relevant information from documents before generating an answer.

This helps an AI chatbot answer questions using the provided information.

What is ChromaDB?

ChromaDB is a vector database used to store and search text embeddings.

It helps retrieve document chunks that are relevant to a user's question.

What is an API?

An API allows different software applications to communicate with each other.

The Groq API allows applications to send prompts to supported AI models.

How does a PDF chatbot work?

First, it extracts text from a PDF document.

Next, it splits the text into smaller chunks.

Then, it stores the chunks in a searchable database.

When a user asks a question, relevant chunks are retrieved.

Finally, an AI model uses the retrieved information to answer the question.
